

CO2-Project Idea (Coding Buben)

Target Users:

The language learning web app is targeted towards anyone interested in learning a new language. The app can cater to different levels of learners, from beginners to advanced speakers, and could be useful for students, professionals, or anyone who wants to improve their language skills.

Tackled Problem:

The web app's main objective is to make language learning more engaging and enjoyable. Traditional language learning methods can be boring and may not motivate learners to continue their studies. By using game-like features and interactive activities, the app aims to create a fun and engaging learning experience for users.

Your Approach:

To achieve the goal of making language learning more engaging, the app will include several game-like features, such as vocabulary training, fill-in-the-blank exercises, picture and vocabulary matching, and a quiz-style game. These features are designed to be interactive, fun, and challenge users to apply their language skills.

The vocabulary training feature can include word lists or categories and different modes, such as flashcards or matching exercises. The picture and vocabulary matching can be a fun way for users to learn new words and phrases related to different topics or situations. Finally, the quiz-style battle-game can be a way for users to apply their language skills in a more interactive and competitive way.

Overall, the app's approach is to create an immersive and enjoyable learning experience for users by incorporating game-like features and interactive activities.

Details to the training features/games:

Picture Matching:

This feature allows users to enhance their language skills by matching words or phrases with corresponding images. The app displays a series of images and provides a set of options or multiple-choice questions related to the pictures. Users need to select the correct word or phrase that corresponds to the image. This feature helps learners associate words or phrases with visual representations, improving their vocabulary and comprehension skills. It can be particularly useful for beginners or those learning a language with different writing systems.

Flashcards:

The flashcards feature provides users with a tried-and-true method for language learning. Users are presented with virtual flashcards that contain a word or phrase on one side and its translation or meaning on the other side. They can swipe or tap to flip the flashcard and reveal the translation. This feature allows users to practice vocabulary, learn new words, and reinforce their understanding of grammar or sentence structures. It can also include additional features like audio pronunciation and example sentences to provide context for the words or phrases.

Battle:

In the battle mode, you engage in a fight against a bot that inflicts damage on you if you answer a question too slowly or incorrectly. Each question is accompanied by a time limit, and you must select or input the correct answer within that time. If you answer the question correctly and promptly, you deal damage to the computer.

The damage can be represented in the form of points or energy units. Every time you answer a question correctly, the bot's points or energy units decrease as you inflict damage. However, if you answer a question incorrectly or the time runs out, the bot inflicts damage on you, reducing your points or energy units.

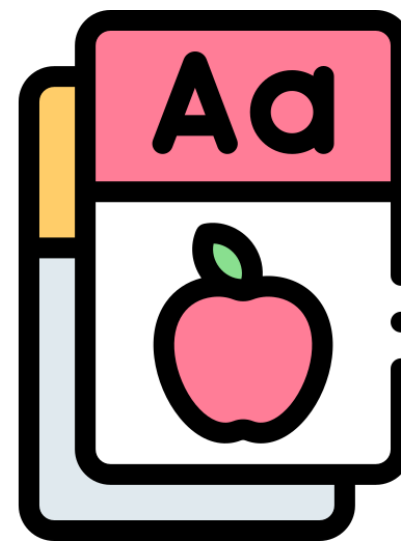

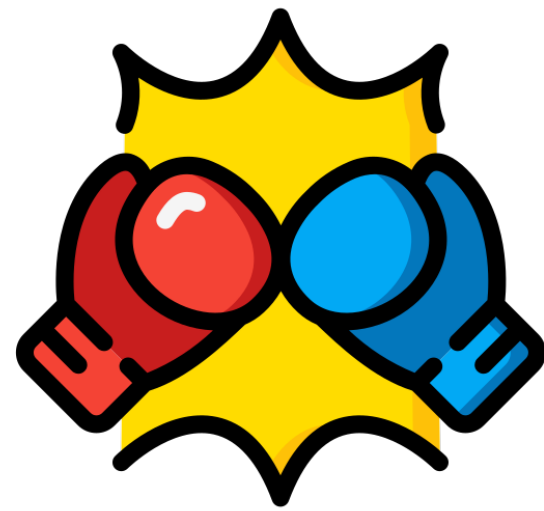

The goal of the battle mode is to defeat the bot by reducing its points or energy units to zero before it defeats you. If you run out of points or energy units, you lose the battle.

The battle mode can offer various difficulty levels to adjust the challenge according to individual user skills. Additionally, the game can present different types of questions, such as translation exercises, fill-in-the-blank tasks, grammar questions, or listening comprehension exercises, to train various language skills.

Attached are the first designs of the webapp. The name as well as the content of the different screens are not final yet.

Welcome to VOCALU
